DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-2, 4, 7-9, 11-12 and 47-50 are rejected under 35 U.S.C. 102(b) as being anticipated by Wall (U.S. Patent No. 482,704).

Wall discloses a tool comprising a cutter (FIG. 8) having a forked end having a first tine (ref. #'s 1 and 2) and a second tine (ref. #'s 4 and 5), wherein said first and said second tines both having an upper surface and a lower surface, and both having an inner side and an outer side, wherein the inner side extends between the upper surface and the lower surface, and the outer side extends between the upper surface and the lower surface, a first cutting blade (ref. #2) extending from the upper surface of said first tine and flush with the inner side of said first fine; a second cutting blade (ref. #4) extending from the upper surface of said second tine and flush with the inner side of said second tine and extending in a first direction from said first and said second tines; wherein the first cutting blade is adapted to cut a groove in a first vertebral body in the first direction, and a third cutting blade (ref. #1) extending from the lower surface of said first tine and flush with the outer side of said first tine

10/685,134 Art Unit: 3733

> and a fourth cutting blade (ref. #5) extending from the lower surface of said second tine and flush with the outer side of said second tine and extending in a second direction from said first and said second tines; wherein the fourth cutting blade is adapted to cut a groove in a second vertebral body in the second direction; wherein the second direction being opposite from the first direction. The tool is handheld by a handle (ref. #A); wherein the first and the second cutting blades are parallel to each other and over the entire length of the blade cutting surface, the first and second cutting blades are parallel to the handle of the tool, such that with the handle moving in a horizontal plane the first and second cutting blades will cut parallel grooves in the horizontal plane. The third and fourth cutting blades are placed further apart than the first and second cutting blades. The two tines have beveled leading edges. The first and second cutting blades are coplanar with the inner side of each tine. The first and second cutting blades are coplanar with the outer side of each tine. The blades are positioned and adapted to bypass nerves. The first and second cutting blades are upper cutting blades and the third and fourth cutting blades are lower cutting blades.

Allowable Subject Matter

Claim 10 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Art Unit: 3733

Response to Arguments

Applicant's arguments with respect to the claims have been considered but not persuasive. With regard the statement of intended use and other functional statements, they do not impose any structural limitations on the claims distinguishable over Wall (U.S. Patent No. 482,704), which is capable of being used as claimed if one so desires to do so. In re Casey, 152 USPQ 235 (CCPA 1967) and In re Otto, 136 USPQ 458, 459 (CCPA 1963). Furthermore, the law of anticipation does not require that the reference "teach" what the subject patent teaches, but rather it is only necessary that the claims under attack "read on" something in the reference. Kalman v. Kimberly Clark Corp., 218 USPQ 781 (CCPA 1983). Furthermore, the manner in which a device is intended to be employed does not differentiate the claimed apparatus from prior art apparatus satisfying the claimed structural limitations. Ex parte Masham, 2 USPQ2d 1647 (1987). The Wall device would be capable of simultaneously cutting grooves into first and second vertebral bodies if inserted in a direction parallel to the bodies rather than at an angle. The corner edges appear to be sharp enough to cut into vertebral body tissue to create grooves if enough force is applied.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

10/685,134

Art Unit: 3733

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mary Hoffman whose telephone number is 571-272-5566. The examiner can normally be reached on Monday-Friday 9:00-5:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Eduardo C. Robert can be reached on 571-272-4719. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
